

To whom this may concern,

My name is Isaac Abell and I am a fourth-year Computer Science Major at the University of Toronto. I'm passionate about solving real-world problems with software, and I've been fortunate to apply my skills across industry, academic research, and independent projects.

I've worked on full-stack applications using technologies like React, Spring Boot, Node.js, and FastAPI, and I have experience deploying scalable systems on AWS. At SAP, I contributed to the development of Demo Environment 2.0, a web app now used by over 20,000 SAP employees and partners. As a research assistant at the Intelligent Adaptive Interventions Lab, I built a web-based platform to support evaluation of an AI teaching assistant, integrating cloud infrastructure with a clean frontend experience.

I enjoy working on fast-moving projects. Whether it's building internal tools to streamline workflows, exploring intelligent systems in an academic setting, or launching personal projects like a student marketplace or a stock trading bot, I focus on creating solutions that are useful, impactful, and thoughtfully designed.

I'm always looking for opportunities to learn and contribute. If you think there's a good fit, I'd love to connect.

Sincerely,

Isaac Abell
